# CUSTOMIZABLE STANDARD PACKAGING

## Pouches

### Simple and cost efficient packaging

We offer sterile packaging in pouches. Peelable or breakable, for autoclave, gamma or ETO, vacuum sealed or not, we can answer to each of your requirements thanks to an extensive range of pouches, available in different materials (Tyvek, OPAPE, etc.)

Pre-qualified and validated according to NF EN ISO 11607 and NF EN 868 standards in force for the packaging of sterile medical devices, the pouches we use are the subject of various tests including sealing strength and biocompatibility testing. These pouches guarantee the maintenance of sterility for at least 5 years.

## Boxes

### Because we also buy with our eyes,

Our outer packaging in cardboard or plastic, can ensure an optimal presentation of your products in the operating theater. Together, we can develop a new, high-performance outer packaging which is innovative and personalized. Backed by responsive partners, we deploy our multiple skills to come up with reliable and innovative solutions for the transportation, protection and presentation of your products.

### Gathering boxes

Our gathering boxes are 100% customizable. In close partnership with our expert team, our customers can develop their own gathering boxes to optimize the presentation, the handling and the inventory management in the hospital. Each side of the box can be printed to integrate your branding, the internal layout of the box as well as any kind of instruction related to your product range. Other concepts than the one shown here are also available.

## Blister

### Made-to-measure: our standard

We design, develop and thermoform in our clean room (class ISO7) all shapes of blister packs, whether sealed or used as simple trays, complying with the NF EN ISO 11607 and NF EN 868 packaging standards for sterile medical devices.

The versatility of our equipment and responsiveness of our R&D teams, allows us to rapidly ensure short or long production runs, which are 100% tailor made.
